

It's Time to Recognize and Honor Those Who Have Worked on National Materials Program(NMP) Activities this Last Year

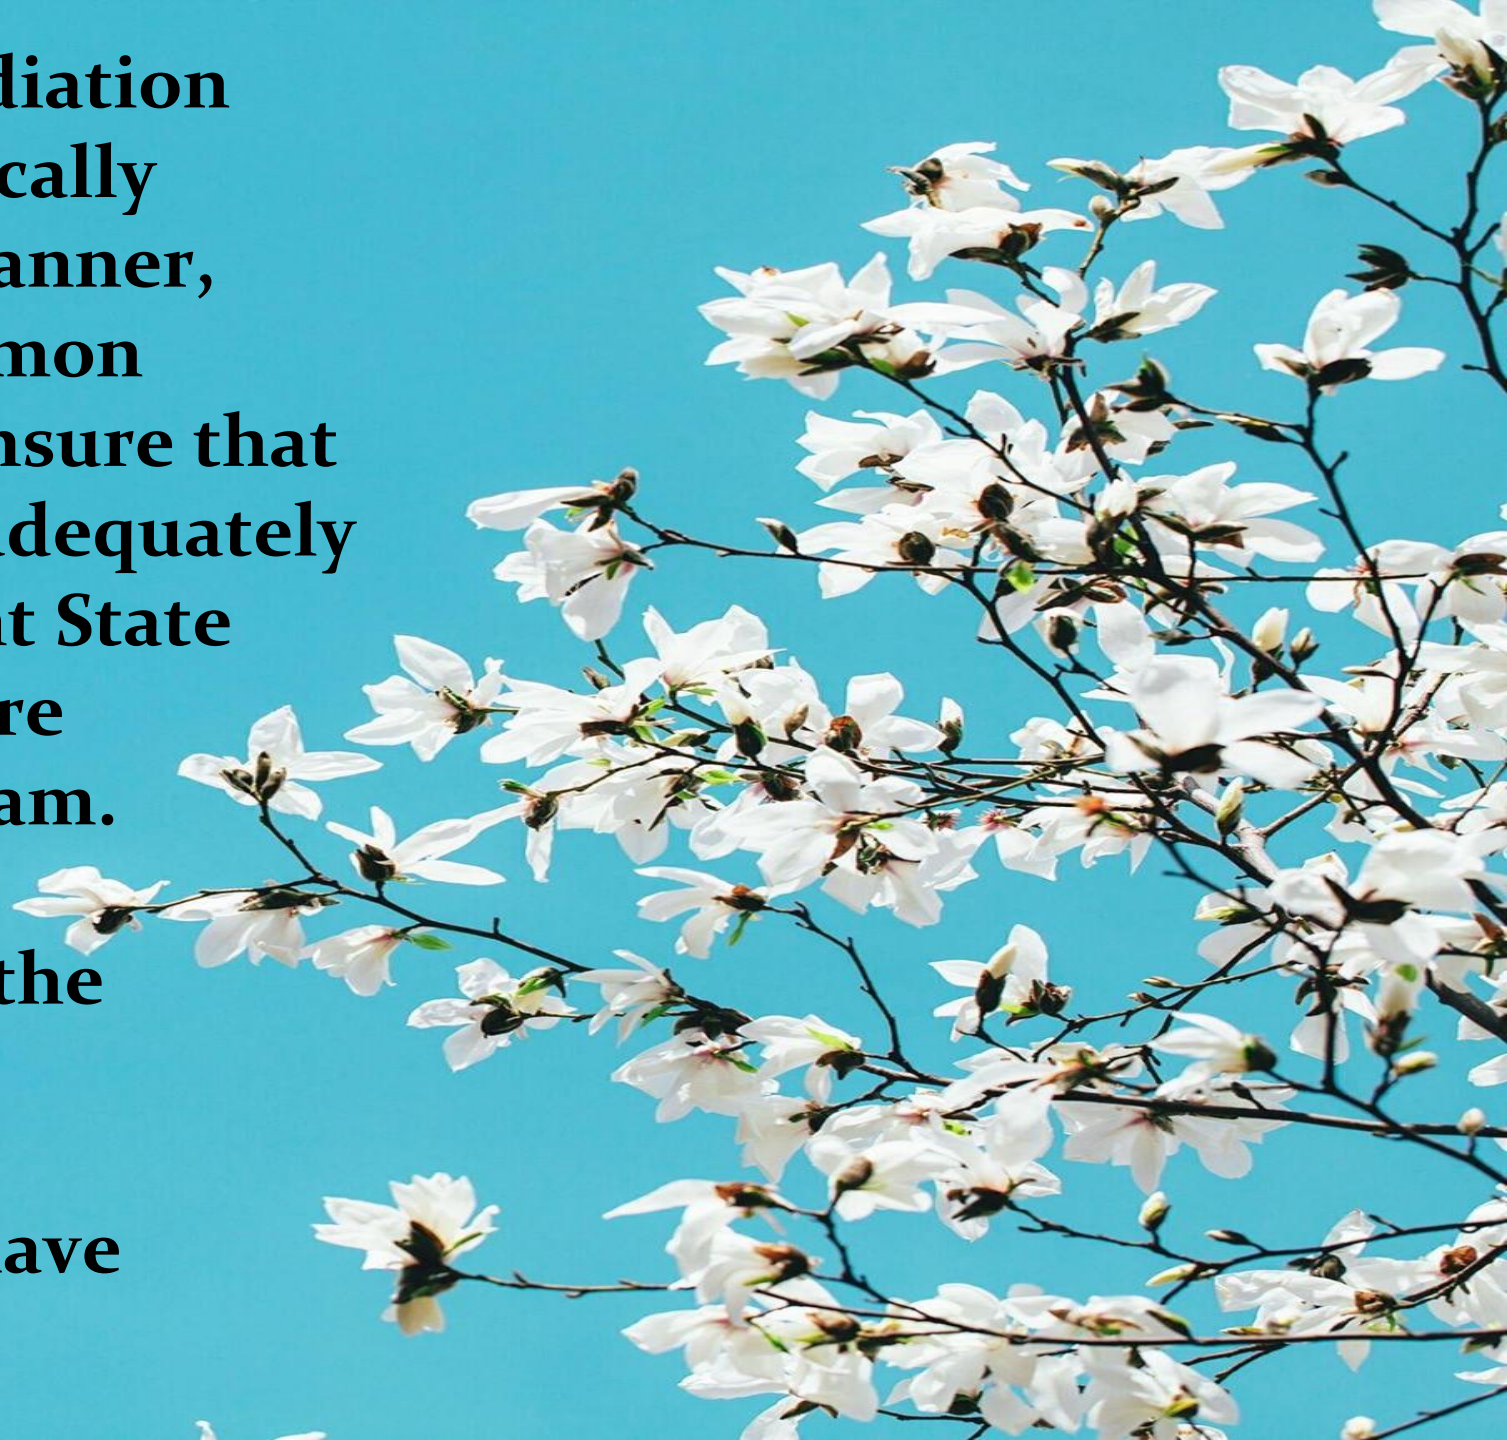

Integrated Material
Performance
Evaluation Program
(**IMPEP**) is a valuable
tool used to gauge the
health of the National
Materials Program.

Agreement State and NRC radiation control programs are periodically evaluated in an integrated manner, using common and non-common performance indicators, to ensure that public health and safety are adequately protected and that Agreement State radiation control programs are compatible with NRC's program.

This is an important asset of the National Materials Program.

Today, we honor those who have served.
